Staff Software Engineer Feb 2023 - Present

Owned end-to-end delivery of broker-dealer integrations and maintained critical infrastructure as member of Core Team

- Architected and led the technical implementation of a mission-critical integration with one of the nation's largest independent broker-dealers, enabling alternative investment access through automatic account imports, hierarchical team management, and real-time licensing/training verification — the system has processed hundreds of thousands of accounts and serves over a thousand active users
- Matured that first broker-dealer integration into stable infrastructure by strengthening data validation, resolving race conditions in account and team creation, retiring 30+ feature toggles, and refactoring modules for long-term maintainability
- Owned a second integration end-to-end with a major full-service wealth management firm, from requirements discovery through implementation, designing a configuration-driven import pipeline intentionally generalized so future integrations can onboard with minimal custom code
- Represented the company in technical discussions with engineers and managers at both partner broker-dealers, translating complex architectural and regulatory constraints into actionable decisions for both technical and non-technical stakeholders
- Onboarded and mentored an engineer to independently own the first broker-dealer integration's development and support, enabling a clean handoff and sustained operational continuity
- Spearheaded the research, design, and development of a Learning Management System, enabling financial advisors to undergo multimedia trainings for investment product access. Integrated real-time data synchronization with external platforms, fortified authentication and authorization mechanisms, and incorporated export features for enhanced usability
- Resolved user importer performance issues for our largest integration partner by refactoring our team structure and implementing a series of data migrations that safely destroyed tens of millions of unnecessary records
- Resolved production incidents beyond core responsibilities, including terminating database-locking queries blocking deployments, fixing unsafe migrations, and investigating SSO-related errors across integrations
- Decreased CI runtime by ~5 minutes by profiling Argo workflow steps and resizing test suite chunks to maximize the benefit of parallelism
- Interviewed software engineer candidates

Handshake

Senior Software Engineer May 2022 - Jan 2023

Maintained and added features to student and employer inboxes (and associated services)

- Worked with PM and designers to create architectural decision records
 - Migrated expensive operations from monolith to messaging miniservice
 - Modelled career fair business rules as GraphQL types
 - Replaced inbox RESTful endpoints with analogous GraphQL mutations
 - Introduced command objects to legacy controller actions to reduce feature rollout risk
 - Participated in hackathon project that inspired real production features
 - Mentored interns and junior developers
 - Worked with EM to improve code review practices and code quality metrics
-

Tuft & Needle

Engineering Manager Dec 2018 - Apr 2022

Lead teams responsible for customer experience tooling, checkout, payments, promotions, and the retail POS system

- Lead standups, grooming, planning, retrospectives, and created architecture documents
 - Helped my direct reports develop career progression plans and learning goals
 - Improved checkout performance and fixed security vulnerabilities
 - Implemented idempotent charge step to avoid double charges improving customer ratings
 - Designed and implemented shipping address validation result caching
 - Updated register to scrub out-of-stock items from customer carts
 - Determined team's objectives and key results
 - Helped stakeholders prioritize feature development and system maintenance
 - Negotiated with business for promotions and raises for direct reports
 - Automated FedEx shipment handling requests
 - Implemented secure deactivation of user records
 - Integrated with Textline API and implemented double opt-in flow
 - Add custom fraud check rules for Affirm and PayPal payment methods
-

Tuft & Needle

Software Engineer Sep 2015 - Dec 2018

Built tools for customer experience users and automated product fulfillment flows

- Upgraded large monolith Rails application from 4.2 -> 5.2 and Ruby from 2.4 -> 2.6
 - Designed and implemented sales tax service outage fallback system
 - Discovered and hardened against SQL-injection vulnerabilities in operations portal
 - Designed and implemented passwordless POS system authentication
 - Add DOS attack protection to high throughput grape endpoints
 - Introduced automated performance testing and reduced product queries 22-fold
-

JetPack Enterprises

Web Developer Jan 2015 - Aug 2015

Repaired, refactored, and added features to legacy software projects

Bloom & Speak Bilingual Tx

Co-founder Dec 2011 - Aug 2017

EDUCATION

Arizona State University

Aug 2005 - May 2009

Bachelor of Science - Political Science

Chartered Alternative Investment Analyst Association

- Aug 2023

Certificate - Fundamentals of Alternative Investments

FINRA

- Jan 2025

Exam - Securities Industry Essentials

Apollo GraphQL

- Sep 2025

Associate Certification - Graph Developer
